

Пример 1.1

Определить удельную энтальпию смеси газов, содержащей $m_{CO_2} := 3 \text{ kg}$, $m_{N_2} := 2 \text{ kg}$ и $m_{O_2} := 1 \text{ kg}$, при температуре $T := 500 \text{ }^\circ\text{C}$.

Решение

$$m_{CM} := m_{CO_2} + m_{N_2} + m_{O_2} = 6 \text{ kg} \quad p := 1 \text{ atm}$$

Массовая доля газов в смеси

$$\omega_{CO_2} := \frac{m_{CO_2}}{m_{CM}} = 0.5 \quad h_{CO_2} := \text{CoolProp_Props}(\text{"H"}, \text{"T"}, T, \text{"P"}, p, \text{"CO2"}) = 993.77 \frac{\text{kJ}}{\text{kg}}$$

$$\omega_{N_2} := \frac{m_{N_2}}{m_{CM}} = 0.333 \quad h_{N_2} := \text{CoolProp_Props}(\text{"H"}, \text{"T"}, T, \text{"P"}, p, \text{"N2"}) = 816.59 \frac{\text{kJ}}{\text{kg}}$$

$$\omega_{O_2} := \frac{m_{O_2}}{m_{CM}} = 0.167 \quad h_{O_2} := \text{CoolProp_Props}(\text{"H"}, \text{"T"}, T, \text{"P"}, p, \text{"O2"}) = 737.95 \frac{\text{kJ}}{\text{kg}}$$

Удельная энтальпия смеси

$$\omega_{CO_2} \cdot h_{CO_2} + \omega_{N_2} \cdot h_{N_2} + \omega_{O_2} \cdot h_{O_2} = 892.1 \frac{\text{kJ}}{\text{kg}}$$
